

How to Clean Your Products

GLASS

1. **Begin by rinsing** your glass with clean water to remove dirt and dust particles that can cause scratches during the cleaning process. As mentioned above, avoid using a power washer or garden hose.
2. **Apply a soft, water-saturated cloth** or a pre-mixed glass cleaner to the surface.
3. **If you prefer** a pre-mixed glass cleaner, follow the printed instructions carefully. Rinse and dry any run-down quickly to prevent the cleaning solution from leaving a residue on your glass.
4. **Rinse your glass** thoroughly with clean water to prevent the cleaning solution from leaving a film on your glass. As stated above, avoid using a power washer or garden hose.

GLASS CLEANING TIP

For the best results, clean your glass during cooler temperatures without direct sunlight.

IMPORTANT

Wash your glass frequently to remove surface dirt and prevent stains.

FRAMES

1. **Begin by rinsing** your frames with clean water to remove dirt and dust particles that can cause scratches during the cleaning process. As mentioned above, avoid using a power washer or garden hose.
2. **Clean the interior and exterior** of your window or door frames with a mixture of mild soap and water. To ensure a safe application, test your cleaning solution on a small area before you apply it to the entire surface.
3. **Apply a light, car-wax solution** to your frames once a year. Make sure to apply the wax after you have cleaned the frames. Otherwise, the wax may seal salt spray deposits to the frames, allowing corrosion to occur.

SCREENS

1. **Remove your screen** carefully and place it on a clean, flat surface.
2. **Use a soft brush** with a combination of mild soap and water to gently remove dirt, salt, and other deposits. As noted above, refrain from using objects that may cause punctures or tears.
3. **Once your screen is completely dry**, reinstall it gently.

HARDWARE

- The wheels on your sliding glass door(s) do not need lubrication since they contain a sealed ball bearing housing.
- A light oil lubricant, like mineral oil, or a light plant-based oil, like hemp, olive, or grapeseed, may be used to preserve easy operation on hinges, thumb turns, and other moving parts.
- Inspect and clean your weatherstrip with a damp cloth or a mixture of mild soap and water. Rinse and dry the weatherstrip thoroughly. If your weatherstrip is damaged, replace it promptly to ensure a proper seal.
- Routinely inspect and clean your water drainage (weep systems) to maintain proper drainage.
- Wipe your tracks and sills with a damp cloth, or use a vacuum to remove dust and dirt.
